## Glossary

**Yield to maturity** is the rate of return an investor would receive if the fund's fixed income securities were held to their maturity dates.

**Weighted average coupon** is the average interest rate (coupon rate) of all the bonds in a fund.

**Weighted average maturity** is the time from today until a bond matures or is redeemed by its issuer. Within a portfolio, the statistic is calculated for each bond and weighted by each bond's market value. In general, the longer a fund's average weighted maturity, the more its unit price will fluctuate in response to changing interest rates.

**Weighted average credit quality** is an indicator of credit risk. This figure is the average credit ratings assigned to a fund's holdings by credit rating agencies. Agencies assign credit ratings after appraising an issuer's ability to meet its obligations. Quality is graded on a scale, with Aaa or AAA indicating the most creditworthy bond issuers.

**Effective duration** is an option-adjusted measure of a portfolio's sensitivity to a change in interest rates. For example, if a bond has a duration of two years, its price would fall about 2% when interest rates rose one percentage point. On the other hand, the bond's price would rise by about 2% when interest rates fell by one percentage point.

**Running yield** for an individual bond is the annual dollar interest payment (coupon) of the bond divided by its market price. Within a portfolio, the statistic is calculated for each bond and weighted by each bond's market value.
